

Record your Own Data

- Stand on the pavement of a fairly busy street (be careful and go with an adult) and look at the next 100 cars that come past. Record the data you collect in a tally chart like this:

Car colour	Number of cars
red	
white	
yellow	
blue	
green	
black	
silver	

Make a graph like this for the wall or blackboard, and use stickers of pictures of cars or round stickers to represent the cars:

Use the pictogram to answer these questions:

- How many blue cars did you see?
- Which colour car is the most popular in your neighbourhood? How do you know?
- Which colour car did you see the least? How do you know?
- You have now represented the data in two different ways: a table and a pictogram. Which method do you prefer? Why?
