

Unseen Passage

Fire Engine

A fire engine is a special type of vehicle that is used by firefighters to help put out fires. Fire engines are equipped with a variety of tools and equipment that are used to extinguish fires, including hoses, ladders, and axes.

Fire engines are also equipped with sirens and flashing lights, which are used to alert people to their presence. When a fire engine is coming, it is important to get out of the way and let it pass. This is because the firefighters need to get to the fire as quickly as possible to help put it out.

Fire engines are usually bright red, which makes them easy to spot. They are also very large and heavy, which helps them to get through traffic and reach the scene of a fire quickly.

Firefighters are brave and courageous people who work hard to protect our communities. They are trained to handle a variety of emergencies, including fires, car accidents, and medical emergencies. They are always ready to help, and they are an important part of our society.

Overall, fire engines are an important tool that helps firefighters to do their job. They are an essential part of our emergency services, and they help to keep our communities safe.
