

# Right Angles

A right angle is a type of angle that measures exactly 90 degrees. Imagine a corner of a room where the walls meet. The angle formed by the walls at that corner is a right angle. Another way to think about it is to visualize a square or rectangle, the corners of the square or rectangle are right angles. It is called right angle because if you draw a line perpendicular to another line at the corner it forms a "L" shape, which is the symbol that represents a right angle.

Identify in which of these shapes can you find a Right angle.

Right Angles:
