

Real Life Word Problems

The Science Fair Stall

Four friends — **Arav, Diya, Tanish, and Meera** — visited the school science fair. There was a cool DIY robot toy being sold at ₹65 each. They all wanted one and rushed to the counter.

Each paid using different notes:

- Arav gave a ₹100 note
- Diya gave ₹200
- Tanish handed ₹500
- Meera gave ₹50 and borrowed ₹20 from her friend

What was the balance each of them got back?

Each one bought 1 robot toy for ₹65.

Ice Cream Day at the Park

It was a hot day and four cousins — **Ravi, Sana, Ishaan, and Anaya** — went to the park.

They saw an ice cream cart with yummy kulfi sticks.

Each kulfi cost ₹28, and they all bought 2 kulfis each.

So, total per person = $₹28 \times 2 = ₹56$

They all paid with different notes:

- Ravi gave ₹100
- Sana gave ₹500
- Ishaan gave ₹200
- Anaya gave ₹60

What was the balance each of them got back?
